A 3D machine first prints a plastic, like ABS, and then prints carbon fibers on top. "This is a more cost-effective and quicker way to print something as strong as or stronger than metal," Darley says. "If it can be scaled up (right now the printers are fairly small), I see it replacing carbon fiber lay-up, a slow and time-consuming ...

3D printing of implants and organs—made from biocompatible and bioresorbable materials—is a medical reality. These products are made using 3D data from detailed scans of a patient's body. Implantable heart valves and bone grafts have been created using "bio-inks" of living cells that are printed on scaffolds.
