Active Directory: Designing, Deploying, and Running Active ...

An AD DS deployment project involves three phases: a design phase, a deployment phase, and an operations phase. During the design phase, the design team creates a design for the AD DS logical structure that best meets the needs of each division in the organization that will use the directory service. After the design is approved, the deployment team tests the design in a lab environment and then implements the design in the production environment.

Understanding AD DS Design | Microsoft Docs

Active Directory (AD) is one of the most critical components of any IT infrastructure. In a Windows-based environment, almost all the applications and tools are integrated with Active Directory for authentication, directory browsing, and single sign-on. An outage in Active Directory can stall the entire IT operations of an organization.
