under a serious
handicap

- He didn't know how heredity worked
- This lack of knowledge left two big gaps in Darwin's thinking

Read Free Chapter 16 Evolution Of Populations

The process of evolution occurs only in populations and not in individuals. A single individual cannot evolve alone; evolution is the process of changing the gene frequencies within a gene pool. Five forces can cause genetic variation and evolution in a population: mutations, natural selection, genetic drift, genetic hitchhiking, and gene flow.
