## **Fault-tolerant Control Systems - Design and Practical ...**

Fault-tolerant control system design and analysis against actuator and sensor failures have been treated in detail in Chapter 2 for linear and nonlinear systems. Chapter 3 is devoted to the application of fault-tolerant control strategies on a physical lab-scale winding machine. The book has clearly shown that the effects of faults can be compensated with properly designed fault-tolerant control systems.

A Fault-Tolerant Control (FTC) system is defined as a control system with fault-tolerant capability. The main objective of the FTC is to maintain the specified operations of a system under consideration, and to give operators (or automatic monitoring systems) enough time to repair the damage or take alternative measures to avoid catastrophe (Chen and Patton, 1999).

Fault Tolerant Control Design For Polytopic LPV Systems This paper deals with a Fault Tolerant Control (FTC) strategy for polytopic Linear Parameter Varying (LPV) systems. The main contribution consists in the design of a Static Output Feedback (SOF) dedicated to such systems in the presence of multiple actuator faults/failures.

Fault-Tolerant Process Control focuses on the development of general, yet practical, methods for the design of advanced fault-tolerant control systems; these ensure an efficient fault detection and a timely response to enhance fault recovery, prevent faults from propagating or developing into total failures, and reduce the risk of safety hazards.

to continue its intended operation, possibly at a reduced level, rather than failing completely, when some part of the system fails. The term is most commonly used to describe computer systems designed to continue more or less fully operational with, perhaps, a reduction in throughput or an increase in response time in the event of some partial failure.

This paper focuses on the fault-tolerant control (FTC) problem for an electric power steering (EPS) system subjected to stochastic sensor failures, and a novel fault-tolerant controller is proposed based on the genetic algorithm (GA).
