How Is FireEye Setting An Ambitious Glance Into The ...

In production, many advanced analytics feed real-time data streams to a predictive model that has been published as a web service. The incoming data stream is typically captured in some form of queue and a stream processing engine pulls the data from this queue and applies the prediction to the input data in near real time. Stream processing. Once you have a trained model, prediction (or scoring) is typically a very fast operation (on the order of milliseconds) for a given set of features.
