Judgment under Uncertainty: Heuristics and Biases. This article described three heuristics that are employed in making judgements under uncertainty: (i) representativeness, which is usually employed when people are asked to judge the probability that an object or event A belongs to class or process B; (ii) availability of instances or scenarios, which is often employed when people are asked to assess the frequency of a class or the plausibility of a particular development; and (iii) ...

This research, called the heuristics-and-biases program, challenged the idea that human beings are rational actors and first gained worldwide attention in 1974 with the Science paper " Judgment Under Uncertainty: Heuristics and Biases " and although the originally proposed heuristics have been refined over time, this research program has changed the field by permanently setting the research questions.

Judgment under Uncertainty: Heuristics and Biases Amos Tversky and Daniel Kahneman Tversky and Kahneman use this article to summarize and explain a compilation of heuristics and biases that hinder our ability to judge probabilities of uncertain events.

### Summary (Heuristics and Biases)

This lecture covered judgement, Heuristics and Biases and gave an overview of how this topic relates to textbook models of choice under uncertainty and value. The lecture outlines what is meant by heuristics; discusses theories of why they may be adaptive; outlines the idea of bias and how this relates to heuristics; examines the main Kahneman and Tversky literature and looks at examples of experiments on availability, representativeness and anchoring; examines overconfidence and planning ...
