### Positioning in Anesthesia and Surgery | Anesthesiology ...

Patient positioning is a subject of prime concern to the anaesthetist and surgeon; it is also occasionally a cause of conflict between the anaesthetist attempting to maintain parameters within physiological limits while the surgeon attempts to push anatomical considerations to their limits in an attempt to achieve optimum access to the surgical target.

### Positioning in Anesthesia & Surgery - Edge - 1998 ...

Positioning the patient for a surgical procedure is a shared responsibility among the surgeon, the anesthesiologist, and the nurses in the operating room. The optimal position may require a compromise between the best position for surgical access and the position the patient can tolerate. The chosen position may result in physiologic changes and can result in soft tissue injury (eg, nerve damage, pressure-induced injury or ulceration, or compartment syndrome).

### Patient positioning for surgery and anesthesia in adults ...

Safe positioning requires planning and good communication between the anaesthetist and surgeon. Adequate numbers of skilled personnel are required at the beginning and at the end of a surgical procedure to facilitate safe positioning. Knowledge of physiological changes associated with the position can help predict potential problems.
