The NAV/SQL Performance Field Guide. "The NAV/SQL Performance Field Guide" is a booklet for the experienced NAV/SQL administrator which explains in a simple and easily understandable way the known (and unknown?) performance problems encountering with Microsoft® Dynamics™ NAV (Navision®) and Microsoft® SQL Server™ and gives practical advices, solutions and recommendations to fix and avoid problems; covering all major areas of performance optimization and troubleshooting:

STRYK System Improvement / NAV/SQL Performance Field Guide

In 2006 I started to put all this into a structured document, one I could use more straight in my optimization workshops - so "The NAV/SQL Performance Field Guide" was born. It's not a replacement of any official NAV/SQL documentation and requires some pre-knowledge about certain issues, but this "braindump" should give feasible advice and practical hints for the daily work with NAV and SQL.

Network performance is improved by the use of the Dynamics NAV Server data cache, which reduces the number of calls to the SQL Server. After one user has read a record, subsequent users who reads the same record get it from the data cache. In earlier versions of Microsoft Dynamics NAV, the data cache was isolated for each user.
