This lab uses the glenco simulator, Virtual Lab: Population Biology to collect data on two populations of paramecium, *P. caudatum* and *P. aurelia*. Though the simulator doesn't expressly say it, the activity illustrates the competitive exclusion principle by showing students how each population behaves when grown alone or when mixed together.

Virtual Lab: Population Biology

Population ecology Virtual Lab I A population is a collection of individuals of the same species that live together in a region. Population ecology is the study of populations (especially population abundance) and how they change over time. Crucial to this study are the various interactions between a population and its resources.

Population ecology Virtual Lab I : Biotechnology and ...

Like the individual organism, the population is a real and functional unit in biology. Defined as groups of organisms that are genetically and spatially distinct from other such groups, the population is the fundamental unit of evolution. Populations are dynamic, they grow, decline, colonize new populations, and go extinct.
